PURE Personal User Overview

The Personal User Overview is a substantive improvement to how you, as a personal user, can access, work, explore and add content within Pure. The overview is tightly integrated with your Pure and PlumX data at the research output, project and researcher level. This includes coverage of content added by yourself and your institution, and includes PlumX mentions, usage, captures, social media and citation data for each research output where available.

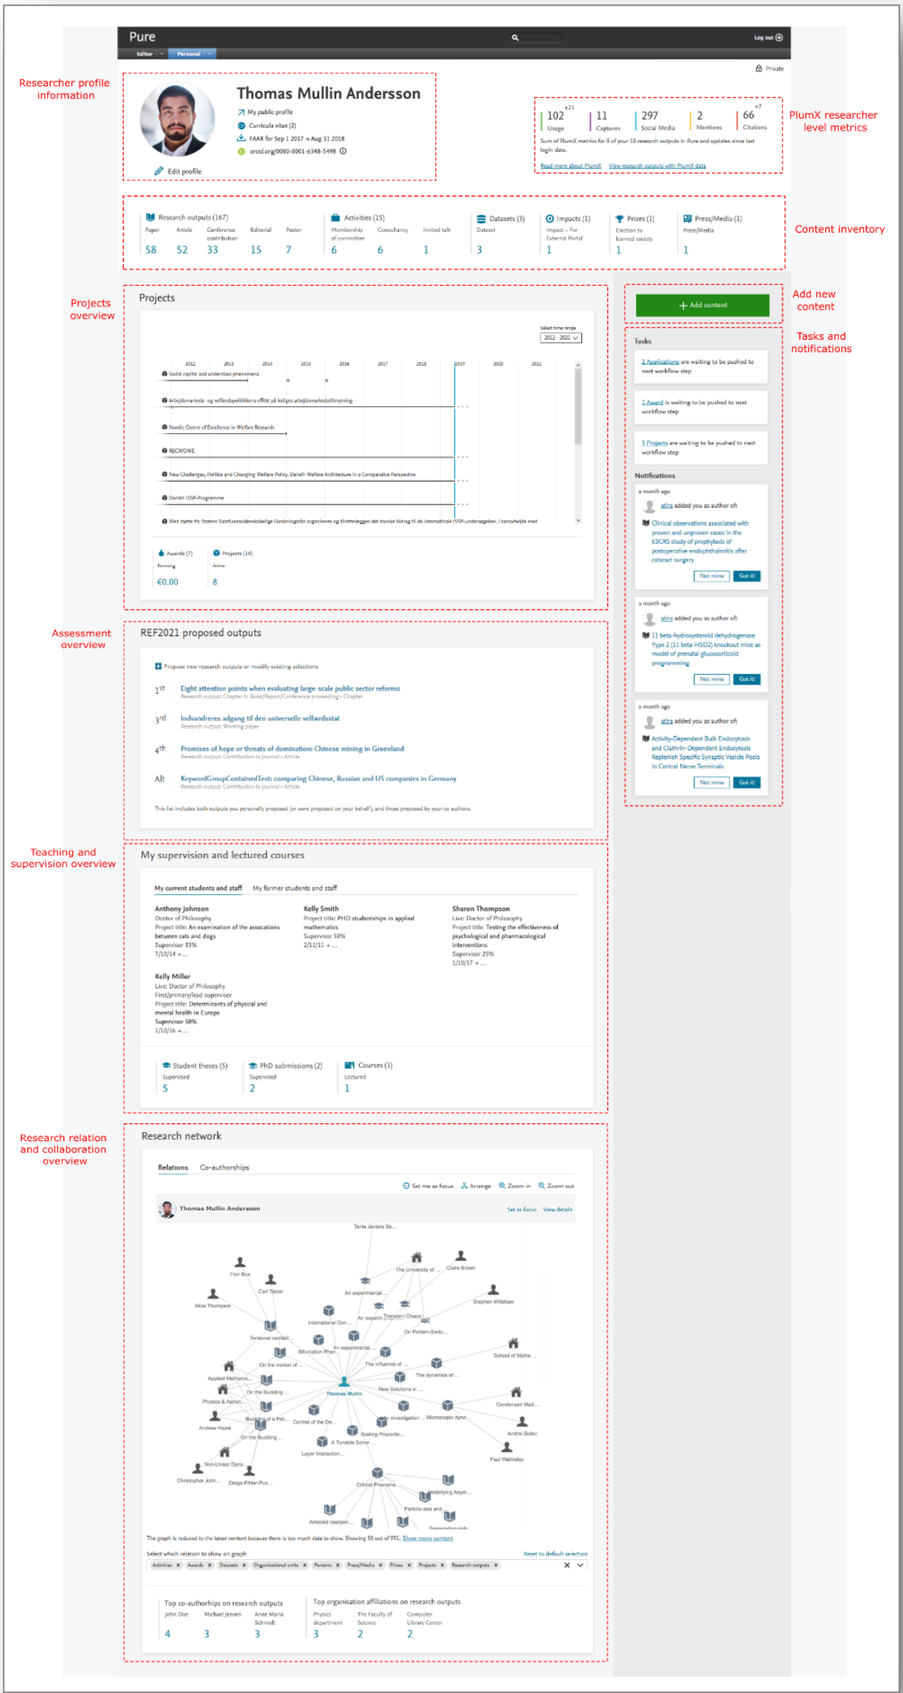
The overview is in a cleaner, simplified style, with improvements to fonts and colour selection for accessibility. The components found in the new overview, and in this guide, include:

- Researcher profile;
- Research output inventory;
- Project timeline;
- Supervision and teaching overview;
- Collaboration map.

It is important to note that:

- the overview is available only to yourself and users with viewing rights, which includes PURE administrators, support staff, and trusted users;
- it is not publicly visible;
- it is not your portal profile.

Layout of all components



Components

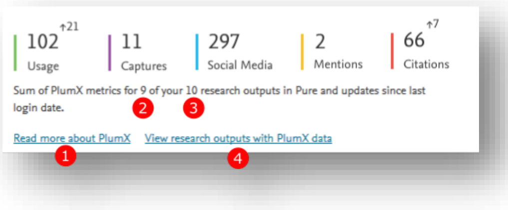
Researcher Profile

Your primary information is presented in this section. This includes access to your:

1) Public profile (Pure Portal Profile or custom equivalent);
2) CVs created, and option to create a CV;
3) FAAR report – this is not available;
4) ORCID ID and option to authenticate your ID;
5) Options to edit your profile.

By clicking 'Edit profile' all options to add a Biography, IDs, a profile photo, links and information, academic qualifications, and fields of research, are available.
A guide on how to update your PURE profile is available from the PURE Support webpage at this link https://www.ulster.ac.uk/internal/research/puresupport

PlumX metrics



This section shows summaries of all your research outputs with associated PlumX metrics. If there are changes in the metrics between logins, the changes will be shown above the total for each metric.

For more information on each of the PlumX metrics, you can click on the **(1)** PlumX link which will direct to https://plumanalytics.com/learn/about-metrics/.

As an example, in the screenshot, for the **(2)** 9 of your research outputs with associated PlumX metrics (out of a total of **(3)** 10), since your last login, the usage metric total has increased by 21 to a new total of 102. There have also been 7 new citations to one or more of the 9 research outputs, with a new total count of citations of 66.

You can view research outputs with associated PlumX metrics in Pure **(4)**.

Important note: Metrics from Plum are currently limited to what is indexed in Plum. As more content is indexed by Plum, coverage will increase. Updates to most metrics are processed by Plum on a weekly basis. Therefore, if you login more than once in a week, changes will not be shown until you login the following week.

Content inventory

The content inventory is a summary of all your content in Pure. Content types are ordered by the count of each sub-type. When clicked, each type and sub-type will be opened in the overview editor, with the appropriate filter activated.

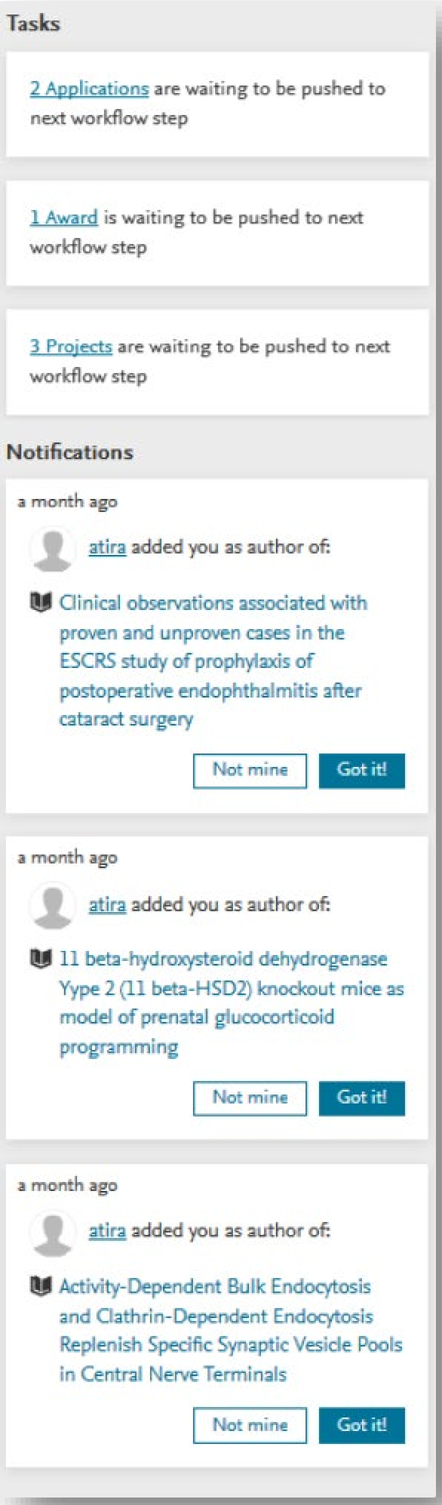
Project overview

This functionality has not been enabled in PURE, but it is anticipated it will be available at some point in 2022.

Adding new content

You can add content in exactly the same way as before or use the '+Add content' button. This will open the standard window to use a template to create or import new content.

Tasks and Notifications



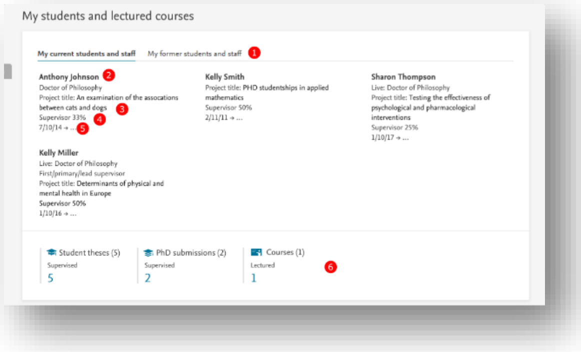
Tasks and notifications notify staff of potential research output matches, workflow push requests and general notifications.

You can click on links within tasks and notifications and the appropriate windows will open for further action if necessary.

If you have a large number of tasks and/or notifications, you can load more by addressing or dismissing current tasks or notifications.

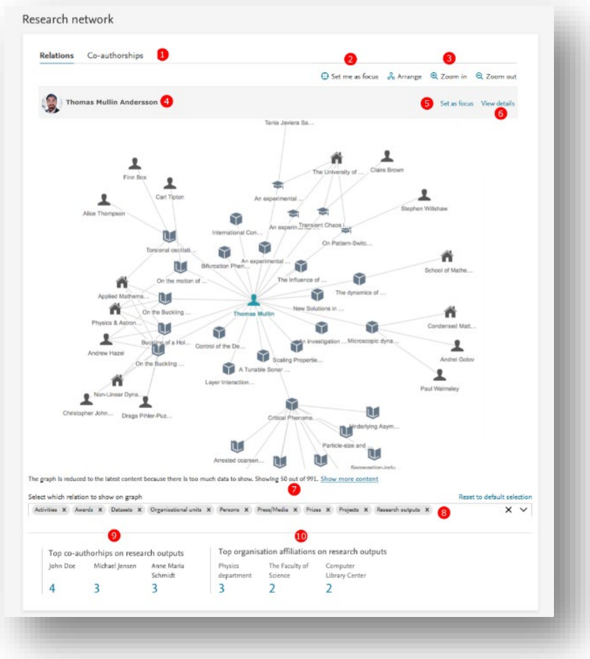
Messages older than 6 months will be automatically removed.

Teaching and Supervision Overview



For users who teach or supervise, the new overview provides a summary of your **(1)** current and former students, with information such as **(2)** student name, **(3)** project title, **(4)** your percentage share of supervision, and the **(5)** supervision period. Outputs, submissions and courses related to your teaching and supervision activities are presented in the **(6)** inventory at the bottom of the section and you can click through to the appropriate overview via the links in the inventory.

Research relation and collaboration overview



The overview features an improved research relation and collaboration network map. The map is a useful way for you to interact with, and explore, your relationships with your research output, activities, co-authors and affiliations.

You can **(1)** switch between showing all content relations in your network or co-authorships, **(2)** set yourself as the focus point within the network, **(3)** arrange the network map for optimal viewing and zoom in or out of the network.

If an entity has been selected in the network, it is shown **(4)** at the top of the network, with the option to **(5)** set the entity as focus point or **(6)** examine the details of the entity via the appropriate editor window.

To help speed up load times, a maximum of **(7)** 50 top linked relations (and 100 top collaborations) are shown. You can of course show more content using the link, but this may have a detrimental effect on performance. Relation types can be filtered using the **(8)** drop down filter tool bar.

The network inventory highlights your **(9)** top collaborating individuals, and **(10)** your most frequent affiliations listed in the research outputs. If you click on either metric, you will be presented with the overview editor of all your research outputs related to those collaborators or institutions.
