Website: ecce2019.eace.net

This leading conference in human-computer interaction, human factors design and cognitive engineering offers an unparalleled opportunity for both researchers and practitioners to exchange new ideas and practical experiences from a variety of domains. In addition to ACM proceedings, best papers will be published in the Behaviour & Information Technology Journal (Impact Factor = 1.380).

Our special theme for ECCE in 2019 is 'Designing for Cognition'. Interacting with digital technologies, apps, wearables, 'Internet of Things' can be cognitively and emotionally demanding in our everyday lives. Now more than ever, we need to consider how 'Designing for Cognition' can help us engage in and enjoy seamless intuitive interactions. The theme also involves new ways to understand cognition when interacting in the wild and to research and evaluate our interactions across work, home and community, especially considering the rise of knowledge derived from user data analytics.

Due date for all paper submissions::
22nd February 2019

General Chairs:

Prof. Maurice Mulvenna
(md.mulvenna@ulster.ac.uk)

Dr Raymond Bond
