Enquiry-based Learning

Enquiry-Based Learning

A student centred approach to learning and teaching which has an emphasis on group work and uses information sources such as the library and the worldwide web .

Typically it can be split into three subsections:

Problem-based Learning

Is an exploration of scenario driven learning experience. They are often single subject based, authentic, are short in duration, have set steps and solutions are provided and discussed.

Small Scale Investigations

Often based around field work or case studies that have been adapted to disciplinary contexts.

Project-based Learning

This includes projects which can be live in collaboration with industry or indeed research projects. This method encourages a research-based approach to projects and processes. Often multi-disciplinary by nature, tend to be longer in duration (days/weeks), have general steps, goals and usual output a product, practice or service. *Adapted from: <http://www.ceeb1.manchester.ac.uk/eb1/>*
