 THESE INSTRUCTIONS ARE FOR ANDROID 2.3.3

We have used an Android phone running software version 2.3.3. The screenshots and menu options referenced here may be slightly different depending on the version of Android software running on your phone.

Please Note: Any advice provided by the Service Desk for smartphone devices such as Blackberry or Android is on a 'best endeavour' basis and is not guaranteed to work.

Also included at the bottom of the document are instructions for updating a stored password for a Wi-Fi connection.

Connecting to eduroam

1. Open the “Settings” menu on your phone
2. Tap the “wireless and connections” option
3. Ensure that the “Wi-Fi” option is ticked, then tap on “Wi-Fi settings”.
4. From the list of Wi-Fi networks, tap on “eduroam”.
5. Configure eduroam settings.
   - Set the “EAP method” to “PEAP”.
   - Set the “Phase 2 authentication” to “MSCHAPV2”.
   - Leave the “CA certificate” as “Unspecified”.
   - Leave the “User certificate” as “Unspecified”.
• Enter your “Identity (username)” in the format given below:

  **For students:**
  <<Your student bcode>>@sd.ulster.ac.uk

  **For staff:**
  <<Your staff ecode>>@ad.ulster.ac.uk

• Leave the “Anonymous identity” blank.

• Enter your university “AD network password” and tap the “Connect” button. If the connection fails tap the “Connect” button a second time.

---

**Updating the password for an existing eduroam connection**

1. Open the “Settings” menu on your phone
2. Tap the “wireless and connections” option
3. Ensure that the “Wi-Fi” option is ticked, then tap on “Wi-Fi settings”.
4. From the list of Wi-Fi networks, press for a second on “eduroam”. Tap “Modify network config”.
5. Update the “Password” to your new password and click on the “Save” or “Connect” button.
