

Learning Spaces

Ulster University cares about our students' learning experiences and as a result we have invested heavily in our learning environment, with new teaching blocks housing both formal and informal learning spaces in Coleraine, Magee and our new campus is under development in Belfast as well as the transitional period enhancements on our Jordanstown campus. This is a very exciting time for the institution, its staff and students.

Physical Spaces

Learning spaces are not just the formal classrooms such as lecture theatres, seminar rooms, labs and computer suites, but they also include other spaces such as the library and informal areas in atriums, social spaces, coffee shops, corridors and outside. At Ulster University we encourage on-campus learning through sequencing of learning activities and out of class activities that is often supported with technology-based self study resources via our VLE.

Digital Spaces

At Ulster University we have adopted a blended approach which takes advantage of the opportunities the physical and digital learning spaces provide for our staff and students. Our virtual learning environment (VLE) provides a number of flexible tools for teaching, learning and assessment through online collaboration, group and project activity. Other tools available to our students and staff are Office365, Panopto video platform and a number of interactive polling tools.
