PURE Integration with ORCiD

What is an ORCiD?

ORCiD (Open Researcher and Contributor ID) provides a persistent digital identifier that distinguishes you from every other researcher and supports automatic linking between you and your publications and professional activities. You can find out more at http://orcid.org/.

Why should you have an ORCiD?

⇨ ORCiD protects your scholarly identity by disambiguating researcher profiles;

⇨ It is a globally recognised persistent ID;

⇨ ORCiD is recognised by some of the largest funders, publishers and research organisations, including mandatory requirement from some eg. Wellcome Trust, the Royal Society and NIHR UK;

⇨ Your ORCiD can be integrated with PURE enabling the push and pull of your publications between the two systems;

⇨ Both Pure and ORCiD have built in privacy settings so you can choose what data is visible where.

What does a PURE integration with ORCiD mean?

PURE integration with ORCiD enables you to link your ORCiD to your PURE profile and to export information from your personal profile within PURE to your ORCiD.

If you choose to export from PURE to ORCiD, the following information is sent:

⇨ Other identifiers on your profile (Scopus Author ID, Researcher ID, Digital Author ID).

> **Note:** If you delete an ID from another system, for example a Scopus author ID, in ORCiD then it will reappear the next time content is exported

⇨ Limited organizational affiliation information:

- Institutional affiliation (along with the City and Country of the organization).
- End date of affiliation (if a former member of staff or student).

⇨ Pure Portal URLs (if configured to be exported by your local Pure administrator).

⇨ Metadata about your research outputs, where all of the following apply:

- the publication status is ePub ahead of print or Published.
- the workflow state matches that configured by your local Pure administrator (validated).
- the visibility is Public.

⇨ You can choose to import publications from ORCiD into PURE.
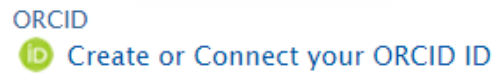

Linking PURE to your Existing ORCiD

|	
If you have an ORCiD and it is already listed in PURE you should **Authorise the export of content to ORCiD** To do this: ⇨ log into PURE and click on the link **Authorise export of content to ORCiD**, this is listed directly beneath your name	Authorise export of content to ORCID
If you have an ORCiD but it is not listed in PURE you should **Connect your ORCiD** To do this: ⇨ log into PURE and click **Edit profile > Create or Connect your ORCiD ID**	✏ Edit profile ORCID ⓘD Create or Connect your ORCID ID

Creating an ORCiD through PURE

If you do not have an ORCiD you can create one through PURE

To do this:
⇨ Click **Edit profile > Create or Connect your ORCiD ID**

Whether you are **Authorising the export of content to ORCiD** or **Creating a new ORCiD**, PURE follows the same process.

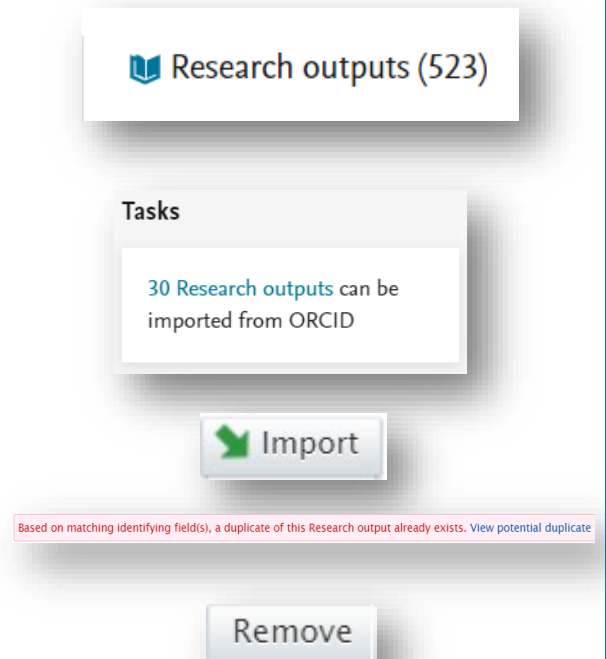

Once the link to ORCiD is created in PURE your ORCiD will be listed in your Personal User Overview screen and everything can be managed from there.

Importing outputs from ORCiD into PURE

If you have outputs in ORCiD they will be listed under **Tasks** on the right-hand side of the Personal User Overview screen
To import these outputs:
⇨ Click on **Research outputs can be imported from ORCiD**
⇨ The outputs will be listed as a content list with the option to **Import** or **Remove**
⇨ If the output already exists in PURE, this will be indicated above the output in the content list
⇨ Remove outputs already listed in PURE, or you do not wish to be imported, to ensure they do not reappear as possible 'candidates' for import .

Exporting outputs from PURE to ORCiD

Once you have **Authorised the export of content to ORCiD**, PURE will push outputs into ORCiD, on a weekly basis, via an automated sync job.
